## Education

- Computer Science  
Rajamangala University of Technology Suvarnabhumi  
2020 - 2024

## Technical Skills

### Web Technologies & Frameworks:

- HTML 5, CSS 3, React 18, Tailwind, Bootstrap 5

### Scripts & UI Design:

- JavaScript, TypeScript, EJS, Figma

### APIs & API Test Tool:

- Golang, Fiber, NodeJS, Express, Postman

### Database:

- MySQL, PostgreSQL, MS SQLServer

### Web Debug Tools:

- Chrome Developer Tools

### Version Control:

- Git, Github, Fork

### ENV & Deployment Tools:

- Docker, Gitlab

### Artificial Intelligence & Data Structures, Algorithms:

- Python 3, C++

## Summary

Greetings, My nick name's SAFE, currently pursuing my Bachelor's degree in Computer Science. Over the past four years, I have gained valuable experience through my academic studies and internships. My fervent interest lies in programming, with a particular focus on database management systems, web application development, AI, and image processing. I possess a solid understanding of web technologies and database design. Additionally, I am proficient in both front-end and back-end development, with practical experience in deploying applications to production servers.

## Work Experience & Project

### Back-end Web Developer, Tester | PEA (headquarters).

November 2023 – March 2024

- Fixed the CPM system (Minor Change) in the API and database, Deploy to server.
- Test the large construction project management system (CPM) according to existing business flow and TMC and make a test report and send to the company for correction.
- Participate in designing the operating budget management system.
- Participate in collecting users requirement of the Operating Budget Management system.

### Final Project Image processing with AI (drowsiness-detector) | RMUTSB.

August 2022 – October 2023

- Collect face data such as photos or clips in high light and low light. To clearly identify the location of each landmark on the face for AI training.
- Testing the drowsiness-detection system on raspberry pi 4 (model B).
- Collect notification data for each condition and do Linear Regression (k means clustering) each time to find the average.

### Project Web Movie Review (Personal Project).

November 2023 - Currently

- Used React, with data supplied by a Golang back end REST API and PostgreSQL database.
- Use an authentication system (JWT), connected to database to display information on Webpages.

## Certificates

Webpage Web-editor Diploma

Secondary Educational Service Area Office

Cabling & Networking contest #9

LINK American Standard

Website application and development course | Thai MOOC:LMS

Web application and Development (7 hours of learning)
